

Collaboration and Generative-AI Disclosure

Name: Ankita Patra

BU ID: U38177365

Course: CS501 E1 — Mobile Application Development

Project: Mobility Lens

Collaboration : Did the project by myself.

AI Use :

I completed the implementation, coding and testing of this exercise individually. AI assistance was used for guidance on Android Studio project setup, Jetpack Compose concepts, UI design suggestions, and documentation. These suggestions were reviewed and adapted before being incorporated into the project.

I manually implemented, executed, tested, and verified the application in Android Studio, including navigation, input validation, successful analysis, and portrait/landscape behavior. I also reviewed the final project structure and documentation before submission.

Generative AI was additionally used to help organize and refine the wording of the project report and this disclosure.
